PNEUMATIC ACTUATION

WELCOME TO CAMOZZI AUTOMATION

Camozzi Automation is a global leader in the design and production of motion and fluid control components, systems and technologies for Industrial automation, Transportation and Life science industries.

Our catalogues

1 Pneumatic actuation

- 1 International standard cylinders
- 2 Compact cylinders
- 3 Stainless steel cylinders
- 4 Guided cylinders
- 5 Cylinders not according standards
- 6 Rotary cylinders
- 7 Rodless cylinders
- 8 Proximity switches
- 9 Hydrochecks, Rod lock, Shock absorbers

2 Electric actuation

- 1 Electromechanical cylinders
- 2 Electromechanical axes
- 3 Drives
- 4 Motors and gearboxes

3 Handling

- 1 Grippers

4 Vacuum components

- 1 Suction pads
- 2 Ejectors
- 3 Vacuum accessories
- 4 Vacuum filters

5 Valves and solenoid valves

- 1 Direct and indirect acting 2/2, 3/2 solenoid valves
- 2 Solenoid, pneumatic and manifold valves
- 3 Mechanical and manual valves
- 4 Logic valves
- 5 Automatic valves
- 6 Flow control valves
- 7 Silencers

6 Fieldbus and multipole systems

- 1 Valve islands
- 2 Multi-serial modules

7 Proportional technology

- 1 Proportional valves
- 2 Proportional regulators

8 Air treatment

- 1 Series MX Modular FRL Units
- 2 Series MC Modular FRL Units
- 3 Series MD Modular FRL Units
- 4 Series N FRL Units
- 5 Pressure regulators
- 6 Pressure switches and vacuum switches
- 7 Accessories for air treatment

9 Fittings, connectors, tubing and accessories

- 1 Super-rapid fittings
- 2 Rapid fittings
- 3 Universal fittings
- 4 Fittings accessories
- 5 Quick-release couplings
- 6 Tubing, spirals and accessories
- 7 Fittings and accessories for applications of medical gases
- 8 Mini ball valves

General index

1 International standard cylinders

	Section	Page
 Series 16, 23, 24, 25 Mini-cylinders	1.05	1
 Series 40 Cylinders	1.10	10
 Series 41 Cylinders - Aluminium profile	1.15	19
 Series 63 ISO 15552 cylinders	1.20	28
 New Series 63 END LOCK Cylinders	1.22	51
 Series 61 Cylinders - Aluminium profile	1.25	68
 Series 6PF Positioning Feedback cylinders	1.27	82
 Series 32 Compact magnetic cylinders	1.30	98
 Series 32 Compact cylinders, Tandem and Multi-position versions	1.31	115
 Series 45 Anti-rotation guide units	1.35	119

2 Compact cylinders

	Section	Page
 Series QN Short-stroke cylinders	2.05	125
 Series QP, QPR Short-stroke cylinders	2.10	128
 New Series QL Short-stroke cylinders	2.12	138
 Series RPA Short stroke cylinders with non-rotating rod	2.13	147
 Series 31 Compact cylinders	2.15	151
 Series 31 Compact cylinders, Tandem and Multi-position versions	2.20	166
 Series ST Stopper cylinders	2.25	170

3 Stainless steel cylinders

	Section	Page
 Series 90 Stainless steel cylinders ISO 15552	3.05	177
 Series 94, 95 Stainless steel mini-cylinders	3.15	187
 Series 97 Stainless steel cylinders	3.20	193

4 Guided cylinders

	Section	Page
 Series QC Cylinders with integrated guide	4.05	204

Series 16, 23, 24 and 25 mini-cylinders

- Series 16: \varnothing 8, 10, 12 mm - non-magnetic
- Series 23: \varnothing 16, 20, 25 mm - magnetic, auto-cushioned
- Series 24: \varnothing 16, 20, 25 mm - magnetic
- Series 25: \varnothing 16, 20, 25 mm - magnetic, cushioned

- » Single and double-acting
- » In compliance with ISO 6432
- » Stainless steel rod and barrel
- » Anodized aluminium end-blocks
- » Cushioning types: mechanical with bumper, pneumatic auto-cushioning, adjustable pneumatic cushioning

Series 16, 23, 24 and 25 mini-cylinders are designed according to ISO 6432. It is possible to choose from three different types of cushioning: mechanical (standard bumper on Series 16 and 24), adjustable pneumatic cushioning (Series 25) and pneumatic auto-cushioning (Series 23). This last version, thanks to a patented system, automatically adjusts the cushioning in order to provide optimal deceleration during the entire cushioning phase. The cylinder enjoys smooth, jolt-free movement, reducing vibrations and noise, while also guaranteeing high reliability and constant performance over time.

The adopted technical solutions and the choice of materials have provided the basis for a complete range of versatile and very reliable mini-cylinders. They are suitable to be used in a multitude of industrial applications, especially where operating conditions undergo changes over time like for example wear of machine components. Various mounting accessories are available to fix the cylinders in different ways.

GENERAL DATA

Type of construction	crimped
Operation	single-acting and double-acting
Design	ISO 6432
Materials	anodized aluminium end-caps - stainless steel barrel and rod, aluminium piston - NBR/PU seals, other parts: see the coding example
Brackets	rod end - flange - feet - trunnion
Stroke min - max	Series 16 \varnothing 8 ÷ \varnothing 10: 10 - 250 mm - Series 16: \varnothing 12: 10 - 300 mm - Series 23, 24 and 25 \varnothing 16: 10 - 600 mm; \varnothing 20 - \varnothing 25: 10 - 1000 mm
Bores	Series 16: \varnothing 8, 10, 12 - Series 23, 24 and 25: \varnothing 16, 20, 25
Operating temperature	0°C ÷ 80°C (with dry air -20°C)
Operating pressure	1 ÷ 10 bar (double-acting); 2 ÷ 10 bar (single-acting)
Fluid	filtered air in class 7.8.4 according to ISO 8573-1. If lubricated air is used, it is recommended to use oil ISO VG32. Once applied the lubrication should never be interrupted.
Speed	10 ÷ 1000 mm/sec (without load)

-----------	----------	----------	----------	-----------	----------	------------	--

24	SERIES 16 = non magnetic, with mechanical cushioning 23 = magnetic, auto-cushioning 24 = magnetic, with mechanical cushioning 25 = magnetic, adjustable cushioning
N	VERSION N = standard
2	OPERATION 1 = single-acting, front spring, no cushion (only for series 16, 24) 2 = double-acting 3 = double-acting, through-rod 7 = single-acting, through-rod (only for series 16, 24)
A	MATERIALS A = rolled stainless steel AISI 303 rod, stainless steel AISI 304 tube, anodized AL end-blocks
16	BORE 08 = 8 mm (only for series 16) 10 = 10 mm (only for series 16) 12 = 12 mm (only for series 16) 16 = 16 mm (only for series 23, 24 e 25) 20 = 20 mm (only for series 23, 24 e 25) 25 = 25 mm (only for series 23, 24 e 25)
A	CONSTRUCTION A = Nose nut Mod. V + Piston rod lock nut Mod. U RL = cylinder with rod lock (only for ∅20 - ∅25)
100	STROKE (see graph) = standard V = rod seal in FKM W = all seals in FKM, +130°C (for series 25 only) (___) = extended rod ___mm

SERIES 16, 23, 24 AND 25 MINI-CYLINDERS

PNEUMATIC SYMBOLS

The pneumatic symbols which have been indicated in the CODING EXAMPLE are shown below.

ACCESSORIES FOR MINICYLINDERS SERIES 16 - 23 - 24 - 25

Foot mount Mod. B

Front/rear flange mount Mod. E

Rear trunnion bracket Mod. I

Rod fork end Mod. G

Swivel ball joint Mod. GA

Piston rod socket joint Mod. GY

Piston rod lock nut Mod. U

Nose nut Mod. V

Self aligning rod Mod. GK

Coupling piece Mod. GKF

SERIES 16, 23, 24 AND 25 MINI-CYLINDERS

All accessories are supplied separately, except for piston rod lock nut Mod. U and nose nut Mod. V

SERIES 23: APPLICABLE MASS ACCORDING TO THE CYLINDER'S SPEED

CHOICE OF THE CYLINDER

- 1) Choose the right size according to the force needed in the application
- 2) Check on the graph if the working conditions, mass and speed intersect at a point below the curve that corresponds to the size chosen

m = mass applied to the cylinder
v = speed applied to the cylinder (m/s)

Example:
Diameter = 20 mm; Max speed = 0,4 m/s; Applicable mass = 6kg;

Series 40 cylinders

Double acting, cushioned, magnetic
 Ø 160 - 200 - 250 - 320 mm

- » In compliance with ISO 15552 standards and with the previous DIN/ISO 6431 - VDMA 24562 standards
- » Adjustable pneumatic cushioning
- » Rolled stainless steel rod (Ø 160 - 200 mm)
- » Chrome plated steel rod (Ø 250 - 320 mm)
- » Rod scraper in brass

Series 40 cylinders comply with the ISO 15552 standards and can be assembled with the entire range of standard accessories.

A permanent magnet on the piston of these cylinders is able to send, through proximity switches mounted on the cylinder sliding axis, electrical signals to indicate its position.

This series is normally equipped with end-stroke cushioning which can be adjusted through a screw on the end block.

In order to quieten the impact of the piston on the end block, these cylinders are also equipped with mechanical cushioning.

GENERAL DATA

Type of construction	with tie-rods
Operation	double-acting
Design	ISO 15552
Materials	Coated AL end blocks and piston (Ø250-320 mm), rolled stainless steel AISI 420B (Ø 160-200 mm) or chrome plated steel (Ø250-320 mm) piston rod, zinc-plated steel piston rod nut, anodized AL tube, zinc-plated steel tie-rods and tie-rod nuts, NBR-PU rod - piston and cushion seals, brass rod scraper ring
Mounting	with tie-rods, front flange, rear flange, feet, centre trunnion, front and rear trunnion, swivel combination
Strokes min - max	10 ÷ 2500 mm
Operating temperature	0°C ÷ 80°C (with dry air -20°C)
Operating pressure	1 ÷ 10 bar
Speed	10 ÷ 500 mm/sec (without load)
Fluid	filtered air, without lubrication. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.

Series 41 cylinders - Aluminium profile

Double-acting, cushioned, magnetic
 ø 160 - 200 mm

SERIES 41 CYLINDERS

- » In compliance with ISO 15552 standards and with the previous DIN/ISO 6431/VDMA 24562 standards
- » Rolled stainless steel rod
- » Adjustable pneumatic cushioning
- » Rod scraper in brass

Series 41 cylinders comply with the ISO 15552 standards and can be assembled with the entire range of standard accessories.

The mounting brackets used on the end-blocks tube are designed in an extremely secure way, making use of the cylinder tie-rods positioned internally and not visible on the assembled cylinders. This cylinder series is normally equipped with adjustable cushioning. Moreover, to reduce the noise of the impact of the piston and end-caps, these cylinders are equipped with a mechanical cushioning.

GENERAL DATA

Type of construction	with tie-rods
Operation	double-acting
Design	ISO 15552
Materials	AL end blocks and piston - rolled stainless steel AISI 420B piston rod - zinc-plated steel piston rod nut - anodized AL-profile tube zinc-plated steel tie-rods and tie-rod nuts - NBR rod - piston - cushion seals - brass rod scraper
Mounting	with tie-rods, front flange, rear flange, feet, centre trunnion, front and rear trunnion, swivel combination
Strokes min - max	10 ÷ 2500 mm
Operating temperature	0°C ÷ 80°C (with dry air - 20°C)
Operating pressure	1 ÷ 10 bar
Speed	10 ÷ 500 mm/sec (without load)
Fluid	filtered air, without lubrication. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.

STANDARD STROKES FOR DOUBLE-ACTING CYLINDERS SERIES 41

✕ = Double-acting

Series 63 ISO 15552 cylinders

Single and double-acting, magnetic, cushioned
 ø 32, 40, 50, 63, 80, 100, 125 mm

The Series 63 pneumatic cylinders have been developed to guarantee high performance and versatility. Thanks to a new system of adjustable pneumatic cushioning, the cylinders can always guarantee the best regulation whilst significantly reducing noise caused by the impact of the piston on the end block.

Besides the standard version, which can be used in many sectors, specific solutions have been developed for applications such as food processing, agriculture, in tensioning, dosing systems and dancer arms for winding applications. There are also versions for demanding application environments, capable of withstanding extreme temperatures, corrosive atmospheres etc.

- » In compliance with the ISO 15552 standard
- » Weight reduced by 25%
- » Low noise
- » More accurate with fine regulation of cushioning
- » Flexibility and versatility

VERSIONS AVAILABLE:

- » Low friction
- » Uniform movement (low speed)
- » High and low temperatures
- » Corrosion-resistant
- » Hydrolytic environment
- » Food and beverage
- » Lube-free operation
- » Dirty and dusty environments
- » Protective bellows
- » Back to back
- » Tandem and multi-position
- » With rod lock
- » Polyurethane coating
- » ATEX

GENERAL DATA

Type of construction	profile (with screws) and round tube (with tie-rods)
Design	ISO 15552
Operation	single and double-acting
Type of mounting	with front / rear flange, foot mounting, with front / rear / centre / swivel trunnion
Stroke min - max	10 ÷ 2500 mm
Operating temperature	standard and low friction: 0°C ÷ 80°C (with dry air -20°C) high temperatures (version W): 0°C ÷ 150°C (with dry air -20°C) low temperatures (version Z): -40°C ÷ 60°C (with dry air -40°C) low temperatures (version Y): -50°C ÷ 60°C (with dry air -50°C)
Storage temperature	0°C ÷ 80°C (with dry air -20°C)
Operating pressure	1 ÷ 10 bar (standard, high and low temperatures) 0.1 ÷ 10 bar (low friction)
Speed	10 ÷ 1000 mm/sec, no load (standard, high and low temperatures) 5 ÷ 1000 mm/sec, no load (low friction and uniform movement)
Fluid	filtered air in class 7.8.4, according to ISO 8573-1. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.
Use with sensors	model CSH

STANDARD STROKES FOR CYLINDERS SERIES 63

■ = Single-acting, front spring (standard and high temperatures); ▲ = Single-acting, rear spring (standard and high temperatures);
 ✕ = Double-acting (standard, low friction, high/low temperatures) Other strokes up to 2500 mm are available on request.

Series 63 low friction cylinders - APPLICATION EXAMPLES

SERIES 63 CYLINDERS

CYLINDER IN THRUST

DRAWING NOTES:

- 1. Precision pressure regulator or proportional regulator
- 2. Low friction cylinder
- 3. Force direction
- 4. Band

CYLINDER IN TRACTION

Note: in order to reach the highest performance, it is recommended to connect a precision pressure regulator or a proportional regulator with the low friction cylinder as shown in the drawing.

SERIES 63 CYLINDERS ACCESSORIES

Piston rod socket joint
Mod. GY

Piston rod lock nut
Mod. U

Clevis pin Mod. S

Rear trunnion ball-joint
Mod. R

Coupling piece
Mod. GKF

Swivel ball joint Mod. GA

90° male trunnion
Mod. ZC

Swivel Combination
Mod. C+L+S

Front and rear flange
Mod. D-E

Self aligning rod
Mod. GK

Centre trunnion
Mod. F-63, profile cyl.

Foot mount
Mod. B-41

Front female trunnion
Mod. H and C-H

Rear female trunnion
Mod. C and C-H

Rod fork end Mod. G

Rear trunnion male
Mod. L

Disassemble cyl. key Ø 80
and 100, round tube

Counter bracket for centre
trunnion Mod. BF

Front/rear spot faced
trunnion Mod. FN

Opposed cylinder coupler
Mod. DC-63

Centre trunnion Mod. F,
round tube cyl.

Accessory to mount valves
on the cylinder

Special key to
disassemble cylinders Ø

All accessories are supplied separately, except for piston rod lock nut Mod. U

Series 63 cylinders - profile, double-acting

Series 63 cylinders - round tube, through rod

Versions: 63MT6..., 63MT7...

For the single-acting cylinders, the dimensions L2 and ZM have to be increased with 25 mm.

+ = add the stroke
++ = add the stroke twice

Table note:
* = special key 80-62/8C
(see accessories)

Accessory to mount valves on the cylinder

The mounting sub-base Mod. PCV enables the valve or solenoid valve to be mounted directly on the cylinder, thus forming a compact unit to apply.

Make sure that the WW dimension of the valve to be mounted is smaller than the JJ cylinder dimension.
Further information on <http://catalogue.camozzi.com/downloads>.

Mod.

Special key to disassemble cylinders Ø 80-100, round tube

Material: hardened steel

Mod.	80-62/8C
------	----------

END LOCK cylinders Series 63

Double-acting, magnetic, cushioned
Ø 32, 40, 50, 63, 80, 100, 125 mm

END LOCK CYLINDERS SERIES 63

END LOCK pneumatic cylinders are fitted with automatic mechanical end stroke locks which guarantee safe and secure holding of the cylinder rod in both the fully retracted and fully extended positions. The locks activate and release automatically, without the need for external signals or commands and cylinder END LOCK Series 63 comply with ISO 15552.

The automatic mechanical lock therefore makes the END LOCK cylinders Series 63 highly suitable for use in sectors and for applications where it is essential to lock the cylinder's position, both to avoid sliding during long stops and in situations with an absence of air, for example in transportation, printing & paper and the woodworking industry. In addition, their capability to withstand external forces, that are much higher than the force exerted by the piston, makes the END LOCK cylinder the ideal solution for applications such as lifters, positioners and presses where a greater degree of safety is required compared to the more traditional rod locks combined with blocking valves.

- » Robust design
- » ISO 15552 compliant
- » High reliability
- » Locking force greater than thrust force of cylinder (6bar)
- » Automatic mechanical end-stroke lock in three versions : front; rear; front & rear
- » Automatic unlocking without any pilot inputs
- » Manual unlocking function
- » Ability to deactivate the locking function (during machine set-up phase)

VERSIONS AVAILABLE:

- » High and low temperatures
- » Corrosion-resistant
- » Dirty and dusty environments
- » Protective bellows
- » ATEX

GENERAL DATA

Type of construction	profile (with screws)
Design	ISO 15552
Operation	double-acting
Type of mounting	with front / rear flange, foot mounting, with front / rear / centre / swivel trunnion
Stroke min - max	10 ÷ 2500 mm
Operating temperature	standard: 0°C ÷ 80°C (with dry air -20°C) high temperatures (version W): 0°C ÷ 150°C (with dry air -20°C) low temperatures (version Z): -40°C ÷ 60°C (with dry air -40°C) low temperatures (version Y): -50°C ÷ 60°C (with dry air -50°C)
Storage temperature	0°C ÷ 80°C (with dry air -20°C)
Operating pressure	2 ÷ 10 bar (standard, high and low temperatures)
Fluid	filtered air in class 7.8.4, according to ISO 8573-1. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.
Use with sensors	model CSH

End Lock system features

	Ø32	Ø40	Ø50	Ø63	Ø80	Ø100	Ø125
Static Holding Force** [N]	1000	1000	3000	3000	5500	5500	5500
Axial backlash of locking system [mm]	< 0,15	< 0,15	< 0,15	< 0,15	< 0,15	< 0,15	< 0,15
Minimum unlocking pressure [bar]	2	2	2	2	2	2	2

** maximum applicable load in continuous operation, higher loads may cause permanent deformations to the locking system

STANDARD STROKES FOR END LOCK CYLINDERS SERIES 63

Series 61 cylinders - Aluminium profile

Single and double-acting, magnetic, cushioned
Standard, low friction, low temperatures and tandem versions
Ø 32, 40, 50, 63, 80, 100, 125 mm

Series 61 cylinders comply with the ISO 15552 standards and can be assembled with the entire range of standard accessories. A permanent magnet, mounted on the piston in these cylinders, enables information to be received regarding the piston position by means of proximity switches mounted in grooves along the cylinder profile. These grooves can be covered with a slot cover profile.

This cylinder series is equipped with adjustable end-stroke cushioning. Moreover, they are equipped with a mechanical cushioning in order to reduce the impact of the piston as it reaches the end of the stroke.

- » In compliance with ISO 15552 standards and with the previous DIN/ISO 6431 - VDMA 24562 standards
- » Rolled stainless steel rod
- » Clean design with adjustable pneumatic cushioning
- » Available special versions

TANDEM:

- » Double thrust and traction forces

LOW FRICTION:

- » Friction force reduced by over 40%

LOW TEMPERATURE:

- » Versions for -40°C and for -50°C

G VARIANT FOR DUSTY APPLICATIONS:

- » Highly resistant to dust, cement, resin, mud and wood residue

GENERAL DATA

Type of construction	with tie-rods (inside the profile)
Operation	double-acting, single-acting, tandem. Low friction version: double-acting only.
Design	ISO 15552
Materials	standard: AL end-blocks and piston, rolled stainless steel AISI 420B rod, anodized AL profile tube, zinc-plated steel tie-rods and tie-rod nuts, PU seals; low friction: standard materials with NBR piston seal and NBR rod seal (FKM rod seal on request) low temperature: standard materials with chrome plated stainless steel AISI 420B rod, brass rod scraper ring, stainless steel AISI 303 nuts, stainless steel AISI 420B tie-rods, PU piston seals and NBR rod seal
Type of mounting	with front / rear flange, foot mounting, with front / rear / centre / swivel trunnion
Stroke min - max	10 ÷ 2500 mm
Operating temperature	standard and low friction: 0°C ÷ 80°C (with dry air -20°C) low temperature (-40°C version): -40°C ÷ 60°C (with dry air -40°C) low temperature (-50°C version): -50°C ÷ 60°C (with dry air -50°C)
Operating pressure	1 ÷ 10 bar (standard and low temperature); 0,1 ÷ 10 bar (low friction)
Speed	10 ÷ 1000 mm/sec, no load (standard and low temperature); 5 ÷ 1000 mm/sec, no load (low friction)
Fluid	filtered air, without lubrication. For standard versions only: if lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.

STANDARD STROKES FOR CYLINDERS SERIES 61

■ = Single-acting (standard and low temperature) ✕ = Double-acting (standard, low friction and low temperature)
Other strokes up to 2500 mm are available on request.

A	CONSTRUCTION A = standard with rod nut - RL = cylinder with rod lock
0200	STROKE (see the table) = standard V = FKM rod seal N = tandem (pneumatic symbol: CD8T) R = NBR rod seal W = all FKM seals +130°C C = PU coated cylinder. Colour: Grey* L = low friction version without rod seal (rear supply only)** (_ _ _) = extended piston rod _ _ _ mm G = with brass rod scraper (chrome plated stainless steel AISI 420B rod, NBR rod seal)

Note: all double-acting cylinders are also available in the low friction version.

PNEUMATIC SYMBOLS

The pneumatic symbols which have been indicated in the CODING EXAMPLE are shown below.

Series 61 low friction cylinders - APPLICATION EXAMPLES

CYLINDER IN THRUST

DRAWING NOTES:

- 1. Precision pressure regulator or proportional regulator
- 2. Low friction cylinder
- 3. Force direction
- 4. Band

CYLINDER IN TRACTION

Note: in order to reach the highest performance, it is recommended to connect a precision pressure regulator or a proportional regulator with the low friction cylinder as shown in the drawing.

Series 61 low temperatures cylinders - DETAIL

- 1 = rod seal
- 2 = flexible ring
- 3 = metal scraper

Special key to disassemble cylinders ∅ 80 and 100

Material: hardened steel

Mod.
80-62/8C

Series 6PF Positioning Feedback cylinders

Double-acting low friction, magnetic
 ø 50, 63, 80, 100, 125 mm

Series 6PF pneumatic actuators are equipped with a potentiometric linear position transducer integrated inside the rod. This type of cylinder allows, along the entire stroke, a constant control of the rod position which is read processing the change of the transducer internal resistance.

The pistons have been equipped with a permanent magnet which enables the use of external end-stroke sensors. The dynamic seals are specific for low friction.

Thanks to the electrical connection, realized by means of an M12 male electric round connector positioned on the rear head, these cylinders fulfil the standards of IP67 protection class.

Series 6PF cylinders comply with the ISO 15552 standards and can be assembled with the entire range of standard accessories. They are available with bores from 50mm to 125mm with standard strokes from 50mm to 500mm with intervals of 50mm.

The sturdy design, the flexible installation and the high performance make Series 6PF suitable for use in applications with tensioning cylinders, positioning cylinders and filling, cutting and measuring systems.

- » In compliance with ISO 15552 standards and with the previous DIN/ISO 6431 - VDMA 24562 standards
- » Chrome plated steel rod
- » Protection class IP67
- » Minimal sliding speed of 5 mm/sec
- » Minimal sliding pressure < 0,1 bar
- » G variant for dusty applications (cement, resin, mud, residues from wood, etc...)
- » ATEX version available

GENERAL AND TECHNICAL DATA

PNEUMATIC SECTION	
Construction	inner tie-rods
Operation	double-acting low friction, not cushioned
Materials	see the table on the following page
Mountings	front and rear flange foot mounts front / rear / swivel / intermediate trunnion
Bores	50, 63, 80, 100, 125 mm
Strokes (min - max)	50 ÷ 1000 mm (step 50 mm)
Operating Temperature	0°C ÷ 80°C (with dry air -20°C)
Operating pressure	0.1 ÷ 10 bar
Speed (min - max)	5 ÷ 1000 mm/sec (no load)
Max acceleration	10 m/sec ²
Media	filtered air class 5.4.4 according to ISO 8573-1. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.
Linearity	0.1% of the stroke
Repeatability	0.03% of the stroke
Resolution	Infinite
Hysteresis	< di 0.5 mm
Vibration test according EN 60068-2-6	severity level 3
Shock test according EN 60068-2-27	severity level 2
ELECTRICAL SECTION	
Electrical connection	male connector M12 4 poles IP 67 (EN 60529)
Max input voltage	40 V (stroke 50 mm) 60 V (strokes from 100 to 500 mm)
Max recommended cursor current	< di 0,1 µA
Electrical resistance	5 kohm for strokes from 50 to 300 mm 10 kohm for strokes from 350 to 500 m
Tolerance on resistance	+/- 20%
Max dissipation (40°C)	1 W for stroke 50 mm 2 W for stroke 100 mm 3 W for strokes from 150 to 500 mm
Suitable end-stroke sensors	CST-532 (3 wires) CST-562 (M8)
Suitable M12 connectors	CS-LF04HB (connecteur droit femelle 4 pôles) CS-LR04HB (connecteur femelle à angle droit 4 pôles) CS-LF05HB-D200 (connecteur filaire femelle droit, 5 pôles, 2 mètres) ** CS-LF05HB-D500 (connecteur filaire femelle droit, 5 pôles, 5 mètres) ** CS-LR05HB-D200 (connecteur coudé à angle droit, femelle, 5 pôles, 2 mètres) ** CS-LR05HB-D500 (connecteur filaire femelle à angle droit 5 pôles, 5 mètres) **
** la broche n ° 5 ne doit pas être connectée

CODING EXAMPLE

6PF	3	P	050	A	0200
6PF	SERIES				
3	OPERATION: 3 = double-acting low friction, no cushion			PNEUMATIC SYMBOLS CD22	
P	MATERIALS: P = see the table on the following page				
050	BORES: 050 = 50 mm 063 = 63 mm 080 = 80 mm 100 = 100 mm 125 = 125 mm				
A	CONSTRUCTION: A = standard with rod nut RL = cylinder with rod lock				
0200	STROKES (see the table)				
VERSIONS: = standard P = PU rod seal V = FKM rod seal L = without rod seal (rear supply only) * G = with brass rod scraper EX = ATEX (_ _ _) = extended piston rod _ _ _ mm * The possibility to order the cylinder without piston rod seal further reduces the friction force.					

PNEUMATIC SYMBOLS

The pneumatic symbols which have been indicated in the CODING EXAMPLE are shown below.

GENERAL INFORMATION

To function properly, the potentiometer must be used as a voltage divider and not as a variable resistor.

The measurement must be carried out detecting the voltage and not the resistance.

The electrical connection must be done at an high impedance inlet.

Information about pinout can be found in the instruction sheet or on the product itself.

NOTE TO THE CONNECTOR DRAWING:
1, 3 = inlet voltage
4 = outlet signal
2 = not used

LIST OF COMPONENTS

Series 32 compact magnetic cylinders

Single and double-acting, non-rotating
 Ø 20, 25, 32, 40, 50, 63, 80, 100 mm

- » In compliance with ISO 21287
- » Compact design
- » Wide range of models available in different diameters

Series 32 cylinders, thanks to their compactness, are suitable for installation in confined spaces. Being in compliance with the ISO 21287 Standard, the cylinders Series 32 have the advantage that they can be used in conjunction with mountings/accessories suitable for other standard cylinders ISO15552.

GENERAL DATA

Construction	compact profile
Operation	single and double acting, magnetic
Design	ISO 21287
Materials	anodized AL body and end-blocks - rolled stainless steel AISI 303 rod anodized AL piston - rod seal, end-block OR and piston seal in PU high temperatures: rod seal, OR end-block and piston in FKM (140°)
Mounting	with threaded holes on the end blocks flange - feet - trunnion
Stroke min and max (1)	Series 32F, 32M, 32R Ø20-25 = 5-300 mm Series 32F, 32M, 32R Ø32-40-50-63 = 5-400 mm Series 32F, 32M, 32R Ø80-100 = 5-500 mm
Operating temperature	0°C ÷ 80°C (with dry air -20°C)
Operating pressure	1 ÷ 10 bar (double-acting) 2 ÷ 10 bar (single-acting)
Fluid	clean air without lubrication. If lubricated air is used it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.
Operation speed	10 ÷ 1000mm/sec. (without load)

(1) the minimum stroke for the use of the sensors is 10 mm.

STANDARD STROKES FOR CYLINDERS SERIES 32

✕ = Non-rotating ● = Double-acting, male/female rod thread;
■ = Single-acting, front/rear spring, male/female rod thread.

The pneumatic symbols which have been indicated in the CODING EXAMPLE are shown below.

ACCESSORIES FOR CYLINDERS SERIES 32

Piston rod socket joint
Mod. GY

Piston rod lock nut
Mod. U

Clevis pin Mod. S

Rear trunnion ball-joint
Mod. R

Coupling piece
Mod. GKF

Swivel ball joint Mod. GA

90° male trunnion
Mod. ZC

Swivel combination
Mod. C+L+S

Front and rear flange Mod.
D-E

Self aligning rod
Mod. GK

90° swivel combination
for trunnion Mod. I

Foot mount Mod. B

Front female trunnion
Mod. H and C-H

Rear female trunnion
Mod. C and C-H

Rod fork end Mod. G

Rear trunnion male
Mod. L

Centring sleeve Mod. TR

All accessories are supplied separately.

APPLICABLE LOADS

Standard.
Transversal load (F) dependant on stroke (X)

APPLICABLE LOADS

Through-rod.
Transversal load (F) dependant on stroke (X)

APPLICABLE LOADS

It is possible to use longer strokes as indicated in the general data (excluding radial loads and torque moments). When imposing radial loads on the cylinder it is important to respect the maximum stroke of the centre of gravity. In the presence of torque moments, respect the maximum stroke as shown in the diagrams.

Torque moment (M) dependant on stroke (C).

APPLICABLE LOADS

Anti-rotation.
Transversal load (F) dependant on stroke (X).

APPLICABLE LOADS

Anti-rotation through-rod.
Transversal load (F) dependant on stroke (X).

MOUNTING EXAMPLE

Mounting example for mounting cylinders \varnothing 32; 40; 50; 63; 80; 100.
1 = Rear mounting
2 = Through mounting

N.B. For through mounting with screws through the cylinder it is recommended to use non-magnetic screws.

Mounting example for mounting cylinders \varnothing 20 ÷ 25.
1 = Rear mounting
2 = Through mounting

N.B. For through mounting with screws through the cylinder it is recommended to use non-magnetic screws.

Compact magnetic cylinders Mod. 32F and 32M

+ = add the stroke
1 = groove for sensor

Series 32 compact cylinders, Tandem and Multi-position versions

Double-acting, magnetic
Ø 25, 40, 63, 100 mm

SERIES 32 CYLINDERS - TANDEM AND MULTI-POSITION

- » In compliance with ISO 21287
- » Compact design
- » Wide range of models available in different diameters

Thanks to their great compactness Series 32 cylinders, Tandem and Multi-position, are suitable to be installed within confined spaces and can be used with the same mounting elements of other standard cylinders ISO15552

The Tandem version enables to obtain up to 2 times the thrust force of a normal cylinder (standard traction force), while the Multi-position version can obtain up to three positions with one cylinder only.

GENERAL DATA

Construction	compact profile
Operation	double-acting, magnetic
Material	body and end-blocks = anodized AL rod = rolled stainless steel AISI 303 piston = anodized AL rod seal, OR end-block and piston seal = PU
Mounting	with threaded holes on the end blocks flange - feet - trunnion
Strokes min. and max. (1) Multi-position	Series 32F, 32M Ø 25 = 5-300 mm (dimension x2) Series 32F, 32M Ø 40 - 63 = 5-400 mm (dimension x2) Series 32F, 32M Ø 100 = 5-500 mm (dimension x2)
Strokes min. and max. (1) Tandem	Series 32F, 32M Ø 25 = 5-80 mm Series 32F, 32M Ø 40 - 63 - 100 = 5-100 mm
Operating temperature	0°C ÷ 80°C (with dry air -20°C)
Operating pressure	1 ÷ 10 bar
Fluid	clean air, without lubrication. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.
Operating speed	10 ÷ 1000 mm\sec (without load)

(1) the minimum stroke for the use of the sensors is 10 mm.

SERIES 32 CYLINDERS - TANDEM AND MULTI-POSITION

PNEUMATIC SYMBOLS

The pneumatic symbols which have been indicated in the CODING EXAMPLE are shown below.

Operation scheme

Multi-position - Example: 32M2A040A25/75N
X1 = 25 mm
X2 = 75 mm

Tandem, stroke = 50 mm - Example: 32M2A040A050N2
In order to increase the speed of the rod's return, it is possible to remove the covers from the intermediate end caps and supply the positive chambers from the outside

Series 45 anti-rotation guide units

Suitable for cylinders:

- DIN/ISO 6432 (ø12, 16, 20, 25 mm)
- ISO 15552, previous DIN/ISO 6431 (ø32, 40, 50, 63, 80, 100 mm)

SERIES 45 GUIDE UNITS

- » To be used with VDMA/ISO cylinders
- » Available as ball bearing guide and self lubricating guide

Series 45 guide units can be used with all DIN/ISO 6432 cylinders of ø12 ÷ ø25 and ISO 15552, previous DIN/ISO 6431, cylinders of ø32 ÷ ø100.

They have been developed in order to prevent piston rod rotation and can support possible radial loads.

Series 45 guide units are available in three different models depending on the applicable loads. The UT and HT guides with crawling supports are self lubricating, while HB guides have a ball bush.

To ensure the right choice of the loads in relation to the stroke, please refer to the graphs. The shorter the stroke the higher will be the applicable loads.

GENERAL DATA

Type of construction	U and H
Operation	Mod. 45NUT and 45NHT: without lubrication Mod. 45NHB requires lubrication according to DIN 51825 code KP2G-20
Material	body: anodized aluminium flexible coupling: stainless steel AISI 303 plate: anodized aluminium guided columns: rolled stainless steel AISI 420B (mod. 45NUT and 45NHT) - hardened steel C50 (Mod. 45NHB)
Assembly	by means of threaded holes
Strokes min - max	see diagrams
Installation	in any position

SERIES 45 GUIDE UNITS

45NUT GUIDES - APPLICABLE LOADS DEPENDING ON PROJECTION - GRAPH No 1

B = centre of gravity for applied load
L = load
X = fixed projection + stroke
fixed projection = distance to the centre of gravity

Guide "U" moving on bush (45NUT)

45NHB GUIDES - APPLICABLE LOADS DEPENDING ON PROJECTION - GRAPH No 2

B = centre of gravity for applied load
L = load
X = fixed projection + stroke
fixed projection = distance to the centre of gravity

Guide "HB" with linear ball bearing (45NHB)

45NHT GUIDES - APPLICABLE LOADS DEPENDING ON PROJECTION - GRAPH No 3

B = centre of gravity for applied load
L = load
X = fixed projection + stroke
fixed projection = distance to the centre of gravity

Guide "HT" moving on bush (45NHT)

Guides Mod. 45NUT for cylinders Series 16, 24, 25

Suitable for cylinders Series 16, 24 and 25 DIN/ISO 6432, \varnothing 12 and 16. These guides do not need lubrication. For applicable loads see graph 1.

Cylinders \varnothing 12 and \varnothing 16 use the same guides.

Supplied with:
1x fixing nut.

Draw note:
+ = add the stroke

Series QN short-stroke cylinders

Single-acting, non magnetic
 \varnothing 8, 12, 20, 32, 50, 63 mm

SERIES QN CYLINDERS

Series QN single-acting short-stroke cylinders have been designed so that they can be installed in very small spaces. Due to the compactness and sturdiness of these cylinders, they are mainly suitable for positioning and locking.

The available strokes are indicated in the tables.

GENERAL DATA

Type of construction	compact
Operation	single-acting
Materials	aluminium body - NBR seals - other materials in stainless steel and brass
Operating pressure	P. min 2 bar P. max 10 bar
Operating temperature	0°C ÷ 80°C (with dry air - 20°C)
Fluid	clean air, without lubrication. If lubricated air is used, it is recommended to use oil ISO VG32. Once applied the lubrication should never be interrupted.
Bore	\varnothing 8, 12, 20, 32, 50, 63
Stroke	see table
Type of mounting	by means of screws in the body

Series QP - QPR short-stroke cylinders

Series QP: single and double-acting, magnetic
Series QPR: double-acting magnetic, non-rotating
Ø 12, 16, 20, 25, 32, 40, 50, 63, 80, 100 mm

Series QP - QPR cylinders are available in 10 bore sizes, from Ø12 to Ø100. Their compact dimension allows the installation in small spaces. Because of their particular construction, they can be mounted by means of feet or trunnion.

The guides are manufactured in the external profile parallel to the sliding axis on three sides. These are used to locate the switches that sense the piston position. The non rotating guides make the QPR suitable for supply operations and for handling equipment.

GENERAL DATA

Type of construction	Series QP: compact profile Series QPR: compact with non rotating guides
Operation	Series QP: single and double-acting Series QPR: double-acting
Materials	body: anodized AL rod: rolled stainless steel piston seals: PU rod seals: PU (Ø 12 ÷ 25 mm) - NBR (Ø 32 ÷ 100 mm)
Operating temperature	0°C ÷ 80°C (with dry air -20°C)
Assembly	by means of screws or brackets
Operating pressure	1 ÷ 10 bar (double-acting) 2 ÷ 10 bar (single-acting)
Fluid	filtered air, without lubrication. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.
Strokes (min-max)	Series QP: 1 ÷ 150 mm (Ø12 ÷ Ø 25) - 1 ÷ 200 mm (Ø 32 ÷ Ø 100) Series QPR: 1 ÷ 50 mm (Ø 12) - 1 ÷ 75 mm (Ø 16) - 1 ÷ 100 mm (Ø 20 ÷ Ø 100)
Strokes	the minimum stroke for use of the sensors is 10 mm
Bores	Ø 12, 16, 20, 25, 32, 40, 50, 63, 80, 100

Series QL short-stroke cylinders

Series QL: double-acting, magnetic and non magnetic
 ø 12, 16, 20, 25, 32, 40, 50 mm

- » Compact design
- » Low weight
- » Easy installation

Series QL short-stroke cylinders are available in seven different bore sizes from 12 mm to 50 mm and are designed to cover a wide range of application needs, from light duties in packaging or assembly through to the demanding requirements of handling components for woodworking. The low weight of the aluminium body and the compact design makes this cylinder range quick and easy to install, even in confined or awkward spaces. Series QL is available in double acting, magnetic and non-magnetic designs. A full range of accessories such as standard, large and narrow mounting feet enhance the applicability and usability of the range.

GENERAL DATA

Type of construction	compact profile
Operation	double-acting
Materials	body: anodized AL rod: rolled stainless steel piston seals: NBR rod seals: PU
Operating temperature	0°C ÷ 80°C (with dry air -20°C)
Mounting	by means of screws or brackets
Operating pressure	1 ÷ 10 bar (double-acting)
Fluid	filtered air class 7.8.4 as indicated by ISO 8573-1. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.
Strokes	see available strokes table
Bores	ø 12, 16, 20, 25, 32, 40, 50
Use with sensors	CSC

New

Series RPA short stroke cylinders with non-rotating rod

Double-effect, magnetic
With hollow through rod and mounting stud
Bores: 20 and 30 mm

- » Clean and robust design
- » Light
- » Fixing from the body or with mounting stud
- » Hard anodized aluminium rod
- » Hollow through rod
- » Non-rotating rod
- » Slots on both sides for the positioning of magnetic proximity switches
- » Large range of standard strokes and mounting stud dimensions

The Series RPA short stroke cylinders are double acting actuators with aluminium hollow through rod and mounting stud. Available in two sizes, \varnothing 20 and \varnothing 30 mm, with different strokes and dimensions of the mounting stud, these actuators are equipped with the non-rotating function of the rod.

The Series RPA are prepared for the mounting of magnetic sensors (Series CSD), in fact, on the external profile, along the cylinder tube, you can find sensor positioning slots. Their compact and light design together with the adopted technical solutions make these cylinders suitable to be used, combined with suction pads, in End Of Arm Tooling (EOAT) systems, especially in the sector of plastic injection moulding.

GENERAL DATA

Type of construction	Short stroke
Operation	Double acting, hollow through rod
Materials	Anodized aluminium body, piston and rod HNBR seals
Operating pressure	2 ÷ 8 bar
Operating temperature	5°C ÷ 60°C
Medium	Filtered air in class 7.4.4 according to ISO 8573-1
Lubrication	Not necessary. A pre-lubrication is performed on the cylinder. In case lubricated air is used, we recommend ISOVG32 oil and to never interrupt lubrication.
Mounting	Stud / threaded holes on the body
Use with external sensors	Slots on both sides for Series CSD sensors
Anti-rotation function	With self-lubricating technopolymer anti-friction pads

Mounting examples

Series 31 compact cylinders

Double and single-acting, double-acting non-rotating, magnetic
 ø12, 16, 20, 25 mm
 ø 32, 40, 50, 63, 80, 100 mm UNITOP

SERIES 31 CYLINDERS

The compact dimensions allow Series 31 single and double-acting magnetic cylinders to be installed within confined spaces. These cylinders are suitable for use with feet, brackets.

These cylinders are available in 10 different bore sizes from ø 12 to ø 100. The guides are inserted in the external profile parallel to the sliding axis on three sides. These guides are used to locate the switches that sense the piston position. The construction design of these cylinders provides excellent axis stability. They are available either with a male or female thread. These cylinders can be supplied in W version for high temperatures (140°C). This last version is not magnetic.

- » Compact design
- » Wide range of models available
- » Standard magnetic
- » High temperature (double-acting and non magnetic)

GENERAL DATA

Type of construction	compact profile
Operation	single and double-acting
Materials	AL body and end-blocks - rolled stainless steel AISI 303 rod - AL piston rod PU seals or FKM seals for high temperatures (140°C)
Brackets	flange, feet, trunnion
Stroke min - max	Series 31R, 31M and 31F: ø12÷25 = 1÷200mm, ø32 ÷ 63 = 1÷300 mm, ø80÷100 = 1÷400mm The min. stroke for the use of sensors is 10 mm. Single-acting = 5÷25 mm (see the table of standard strokes)
Operating temperature	0°C ÷ 80°C (with dry air - 20°C)
Operating pressure	1 ÷ 10 bar (double-acting); 2 ÷ 10 bar (single-acting)
Fluid	filtered air, without lubrication. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.
Speed	10 ÷ 1000 mm/sec (without load)

ACCESSORIES FOR COMPACT MAGNETIC CYLINDERS SERIES 31

SERIES 31 CYLINDERS

Swivel ball joint Mod. GA
(cyl. Mod. 31M)

90° swivel combination
for trunnion Mod. I

Rear trunnion Mod. C

Rod fork end Mod. G
(cyl. Mod. 31M)

Piston rod lock nut
Mod. U (cyl. Mod. 31M)

90° swivel combin.
for fem. trunnion Mod. ZC

Rear trunnion Mod. L

Rear and front flange
Mod. D

Foot mount Mod. B

Coupling piece
Mod. GKF

Self aligning rod
Mod. GK

Piston rod socket joint
Mod. GY (cyl. Mod. 31M)

All accessories are supplied separately.

ANTI-ROTATION - Transversal load dependant on projection

It is possible to determine the strokes required as shown in the general data in the absence of radial loads and torque moments. When imposing radial loads on the cylinder it is important to respect the maximum projection of the baricenter. In the presence of torque moments, it is recommended to respect the maximum stroke as shown in the diagrams.

ANTI-ROTATION THROUGH-ROD - Transversal load dependant on projection

It is possible to determine the strokes required as shown in the general data in the absence of radial loads and torque moments. When imposing radial loads on the cylinder it is important to respect the maximum projection of the baricenter. In the presence of torque moments, it is recommended to respect the maximum stroke as shown in the diagrams.

TORQUE MOMENT - dependant on stroke C

It is possible to determine the strokes required as shown in the general data in the absence of radial loads and torque moments. When imposing radial loads on the cylinder it is important to respect the maximum projection of the baricenter. In the presence of torque moments, it is recommended to respect the maximum stroke as shown in the diagrams.

TRANSVERSAL LOAD - dependant on projection

It is possible to determine the strokes required as shown in the general data in the absence of radial loads and torque moments. When imposing radial loads on the cylinder it is important to respect the maximum projection of the baricenter. In the presence of torque moments, it is recommended to respect the maximum stroke as shown in the diagrams.

TRANSVERSAL LOAD THROUGH-ROD - dependant on projection

It is possible to determine the strokes required as shown in the general data in the absence of radial loads and torque moments. When imposing radial loads on the cylinder it is important to respect the maximum projection of the baricenter. In the presence of torque moments, it is recommended to respect the maximum stroke as shown in the diagrams.

Series 31 compact cylinders, Tandem and Multi-position versions

Double-acting, magnetic

Ø 12, 16, 20, 25, 32, 40, 50, 63, 80, 100 mm

- » Compact design
- » Available in different diameters and strokes
- » Standard magnetic

The compact dimensions allow Series 31 cylinders to be installed within very small spaces. These cylinders are suitable for use with feet, flange and trunnion mountings.

In order to complete the compact cylinder series, two new versions have been introduced: tandem and multi-position. The new Tandem version with 2, 3 or 4 stages generates a thrust force which is 2, 3 or 4 times that of the normal cylinder (standard traction force). The Multi-position version allows a maximum of 3 different positions which are determined by the stroke of the individual actuators.

GENERAL DATA

Type of construction	compact profile
Operation	double-acting
Materials	AL body and end-blocks - rolled stainless steel AISI 303 rod - AL piston - PU rod and piston seals
Mounting	flange - feet - trunnion
Min and max strokes (for tandem 31M and 31F)	Ø12÷25 = 1÷80 mm Ø32÷100 = 1÷100 mm
Min and max strokes (for multi-position 31M and 31F)	Ø12÷25 = dimension for X2 max 200 mm Ø32÷63 = dimension for X2 max 300 mm Ø80÷100 = dimension for X2 max 400 mm
Operating temperature	0°C ÷ 80°C (with dry air -20°C)
Operating pressure	1 ÷ 10 bar
Medium:	filtered air, without lubrication. If lubricated air is used, it is recommended to use ISO VG32 oil. Once applied the lubrication should never be interrupted.
Speed:	10 ÷ 1000 mm/sec (without load)

Series ST Stopper cylinders

Single and double-acting, magnetic, non-rotating
Sizes 20, 32, 40, 50 mm

The Series ST Stopper cylinders are pneumatic actuators with rod, complying with UNITOP and ISO 21287 standards, where rod and bushing have been specifically enlarged to ensure high resistance to radial loads and shocks. These cylinders are available in two versions, double-acting and single-acting, and with rear spring. The non-rotating rod version is also available.

The detection of the piston position is enabled by means of proximity switches (Mod. CST or CSH) which are mounted in slots along three sides of the cylinder profile. It is possible to cover the slots with a proper profile (Mod. S-CST-500). The high resistance to shocks and radial loads and the easy mounting makes Series ST particularly suitable for use in transport/conveyor lines where it is required to stop the transit of workpieces and workpiece-holder pallets.

- » In compliance with UNITOP and ISO 21287 standards
- » Compact design
- » Can be used with magnetic sensors
- » Reliable and silent
- » Non-rotating rod version
- » Roller rod version
- » Female threaded rod version
- » High capacity to absorb kinetic energy of workpiece-holder pallets
- » Mechanical end-stroke shock absorbers
- » schéma d'application totale

GENERAL DATA

Construction	profile with self-tapping screws
Cylinder design	compact based on UNITOP and ISO 21287 standards
Operation	double-acting, single-acting rear spring, double-acting rear spring
Sizes	20, 32, 40 (Mod. ST32 only), 50 mm
Strokes (min - max)	5 ÷ 30 mm (see the table of standard strokes)
Rod versions	without thread, with female thread, non-rotating, non-rotating with female thread, non-rotating with roller
Non-rotating function	with technopolymer anti-friction ring
Fixing and mounting	direct with holes on the end-caps, in any position
Type of cushioning	mechanical end-stroke shock absorbers in rubber
Max frequency	5 Hz (Ø 20, 32, 40 mm) - 3 Hz (Ø 50 mm)
Working temperature	0°C ÷ 80°C (with dry air -20°C)
Storage temperature	-20°C ÷ 100°C
Working pressure	1 ÷ 10 bar (double-acting) - 2 ÷ 10 bar (single-acting)
Max rotation play	± 4° (Ø 20, 32 e 40 mm) - ± 3° (Ø 50 mm)
Max torque (for non-rotating version)	1.5 Nm (Ø 20 mm) - 2.5 Nm (Ø 32 e 40 mm) - 3.5 Nm (Ø 50 mm)
Medium	filtered air in class 7.8.4 according to ISO 8573-1 standard.
Lubrication	Not required. The cylinder is pre-lubricated. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.
Use with external sensors	slots on the three sides for proximity switches Mod. CST and CSH

EXAMPLES OF FIXING

Fixing from below

Fixing from above

IMPACT FORCE

Between the mass to stop and the stopper rod, an elastic bumper is assumed to be inserted, which is capable of absorbing the impact by deforming at least 1mm.

Series 90 stainless steel cylinders

Single- and double-acting, cushioned, magnetic
 ø 32, 40, 50, 63, 80, 100 and 125 mm

SERIES 90 STAINLESS STEEL CYLINDERS

- » In compliance with ISO 15552 standards and with the previous DIN/ISO 6431/VDMA 24562 standards
- » Clean design
- » Stainless steel AISI 316
- » End-stroke cushioning

The Series 90 cylinders can be used in critical applications in which a high corrosion resistance is required (for example off-shore, marine, food).

This series of cylinders is normally equipped with end of stroke buffers with adjustable pneumatic cushioning. Moreover, they are equipped with a mechanical cushioning that makes the impact of the piston less noisy as it reaches the end of the stroke.

GENERAL DATA

Construction	with tie-rods
Operation	single-acting or double-acting
Design	ISO 15552
Materials	- end blocks, barrel and rod in stainless steel AISI 316 - seals in NBR - plastic guiding element, NSF H1-certified lubricant
Mountings	several types of cylinders mounting brackets available
Stroke	25 ÷ 800 mm
Operating temperature	0°C ÷ 80°C (with dry air - 20°C)
Operating pressure	1 ÷ 10 bar
Speed	10 ÷ 1000 mm/sec (no load)
Media	Filtered air, without lubrication. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.

Series 94 and 95 stainless steel mini-cylinders

Single-acting and double-acting, magnetic

Series 94: \varnothing 16, 20, 25 mm

Series 95: \varnothing 25 mm, cushioned

- » In compliance with ISO 6432
- » Clean design
- » Stainless steel AISI 316

The Series 94 and 95 cylinders can be used in critical applications in which a high corrosion resistance is required (for example off-shore, marine, food).

Their construction enables the replacement of all seals. Series 95 is normally equipped with adjustable end-stroke cushioning by means of a screw on the end block. In addition both Series 94 and 95 are equipped with a mechanical cushioning in order to make the impact of the piston less noisy as it reaches the end of the stroke.

GENERAL DATA

Construction	end blocks secured to the tube
Operation	single-acting and double-acting
Design	ISO 6432
Materials	end caps, rod and tube in stainless steel AISI 316, seals in NBR, plastic guiding element, NSF H1-certified lubricant
Mounting	several types of cylinders clamps available
Strokes min - max	10 ÷ 500 mm
Operating temperature	0° - 80°C (with dry air -20°C)
Operating pressure	1 ÷ 10 bar
Speed	10 ÷ 1000 mm/sec (without load)
Fluid	clean air, without lubrication. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.

Series 97 stainless steel cylinders

Single- and double-acting, cushioned, magnetic.
Ø 32, 40, 50, 63 mm

SERIES 97 STAINLESS STEEL CYLINDERS

- » Clean design
- » Stainless steel AISI 304
- » Adjustable endstroke cushioning

Series 97 stainless steel cylinders can be used in critical applications where a high level of corrosion resistance is required (for example: off-shore, naval, food industries).

These cylinders are normally equipped with end-stroke cushioning which can be adjusted through a screw on the end block. In order to quieten the impact of the piston on the end block, these cylinders are also equipped with mechanical cushioning.

GENERAL DATA

Type of construction	the end blocks are screwed to the tube with an intermediate Teflon ring
Operation	single-acting and double-acting
Materials	end blocks, tube, rod in stainless steel AISI 304 rod seals in PU, piston seals in NBR plastic guiding element, NSF H1-certified lubricant
Type of mounting	threaded front and rear locking ring pins on front cap ends rear male hinge articulated rear male hinge rear female hinge
Stroke min-max	25 ÷ 800 mm
Operating temperature	0°C ÷ 80°C (with dry air - 20°C)
Operating pressure	1 ÷ 10 bar
Speed	10 ÷ 1000 mm/sec (without load)
Fluid	Filtered air, without lubrication. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.

Series QC cylinders with integrated guide

Double-acting, magnetic piston, guided
 ø 20, 25, 32, 40, 50, 63 mm

These actuators, suitable for use in very limited space, are available in two versions.
QCT version: with sintered bronze bushes, suitable when the side loads applied to the cylinder are high.
QCB version: with linear ball bearings, suitable for high precision and fast cycling applications.

- » Magnetic sensors can be mounted on both sides
- » QCT: bronze bushings version
- » QCB: ball bearing guide version
- » Movement and guidance in one unit

Both versions are equipped with fixed cushioning to prevent direct impact with the end covers. The design of the cylinder body allows the mounting of the cylinder using either top, bottom or side faces. Several "T" shaped grooves in two faces allow sensors to be fitted in a number of positions. Out of standard strokes are available on demand only.

GENERAL DATA

Type of construction	compact guided QCT = sintered bronze bushes QCB = linear ball bearings
Operation	double-acting
Materials	body = anodized AL flange = zinc-plated steel piston rod = rolled stainless steel AISI 303 QCT columns = rolled stainless steel 420B QCB columns = hardened steel C50 seals = PU
Mounting	threaded and non-threaded holes in the body
Strokes min. max	see table
Operating temperature	0°C ÷ 80°C (with dry air - 20°C)
Speed	50 ÷ 500 mm/s
Operating pressure	1 ÷ 10 bar
Fluid	clean air, non lubricated. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.

STANDARD STROKES FOR DOUBLE-ACTING CYLINDERS SERIES QC

■ = Double-acting
Out of standard intermediate strokes available on request (strokes multiple of 5 mm)

Cylinders Series QC

Note: for out of standard intermediate strokes (ex. stroke 35), consider the immediately higher stroke dimensions (ex. stroke 40).

For $\emptyset C$, B, L3 dimensions, see the following page.

+ = add the stroke

In case of use of lateral ports, unscrew the related threaded caps, screw them in the front ports and tighten them up to the cylinder surface (not tighter) having care to use a proper sealer.

Series QCTF - QCBF cylinders with integrated guide

Double-acting, magnetic, with double bearings and flanges
 ø 20, 25, 32, 40 mm

SERIES QCTF - QCBF CYLINDERS

- » Magnetic sensors can be mounted on both sides
- » QCTF: bronze bushings
- » QCBF: ball bearing guide
- » Movement and guide in one unit

The end cushioning is available in three different variants:
 A. fixed mechanical cushion (standard)
 B. with two shock absorbers located on the body
 C. with one shock absorber located central on the rear flange.
 The versions B and C are suitable for handling of higher mass forces and / or when it is necessary to adjust the stroke.

These cylinders have been designed to be used in applications where space is limited. Regarding the bearings, the Slide Units are available in two versions, one with double sintered bronze bushes (Mod. QCTF) and the other with double linear ball bearings (Mod. QCBF). The QCTF version would normally be selected when the side loads applied to the slide unit are high. Mod. QCBF is suitable for fast cycles (less side load) and higher precision.

GENERAL DATA

Type of construction	guided with double bearings and double flanges QCTF = sintered bronze bushes QCBF = linear ball bearings
Operation	double-acting
Materials	body = anodized AL flanges = zinc-plated steel piston rod = rolled stainless steel AISI QCTF columns = rolled stainless steel 420B QCBF columns = hardened steel C50 seals = PU
Mounting	threaded and non threaded holes in the body
Strokes min. max	(see table)
Operating temperature	0°C ÷ 80°C (with dry air -20°C)
Speed	50 ÷ 500 mm/s
Stroke end cushioning Type A	extended stroke - fixed mechanical cushioning retracted stroke - fixed mechanical cushioning we recommend preventing the piston from striking against the end covers
Stroke end cushioning Type B	extended stroke - shock absorber retracted stroke - shock absorber
Stroke end cushioning Type C	extended stroke - shock absorber retracted stroke - fixed mechanical cushioning we recommend preventing the piston from striking against the end covers
Operating pressure	1 ÷ 10 bar
Fluid	clean air, non lubricated. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.

Series QX twin cylinders

Double-acting, magnetic, guided
 ø 10x2, 16x2, 20x2, 25x2, 32x2 mm

SERIES QX TWIN ROD CYLINDERS

- » High force
- » Precise movement
- » Integrated guide
- » QXB: linear ball bearings
- » QXT: sintered bronze bushes

Series QX actuators offer a wide range of solutions covering a great number of applications which require a guided linear movement. The design of the double piston, besides assuring a solid and effective guide, offers double force in compact dimensions. Where a high force with precise movement is required, along with a non-rotation function and integrated guide, the QX cylinders are the ideal solution.

The range includes two guide versions with sintered bronze bushes or with linear ball bearings.

GENERAL DATA

Type of construction	compact, non magnetic QXT = sintered bronze bushes - QXB = linear ball bearings
Operation	double-acting
Materials	body and flange = anodized AL QXT piston rod = stainless steel AISI 303 - QXB piston rod = hardened steel C50 seals = PU
Mounting method	by means of threaded holes
Strokes	from 10 to 100
Operating temperature	0° ÷ 80°C (with dry air - 20°C)
Operating speed	50 ÷ 500 mm/s
Operating pressure	1 ÷ 10 bar
Fluid	clean air, without lubrication. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.

Series 14 compact mini-cylinders

Single-acting

Bores \varnothing 6, 10, 16 mm and strokes 5, 10, 15 mm

With super-rapid fitting \varnothing 4 and M5 port

- » Compact design
- » With threaded or non threaded piston rod
- » Threaded body

Series 14 single-acting compact mini-cylinders have been designed for installation in very small spaces. The design allows the cylinders to be inserted into threaded blocks incorporated in the machine.

All the minicylinders are supplied with a super-rapid fitting incorporated in a tube \varnothing 4 or with a M5 thread. They are available in two versions with either a threaded or a non threaded piston rod.

GENERAL DATA

Type of construction	compact, non magnetic
Operation	single-acting
Materials	body = brass seals = NBR other = stainless steel
Operating pressure	P. min 2,5 bar - P. max 8 bar
Operating temperature	0°C ÷ 80°C (with dry air - 20°C)
Fluid	clean air, without lubrication. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.
Bore	\varnothing 6, 10, 16
Stroke	see table
Mounting method	by means of threaded body

Series 27 roundline cylinders

Double-acting, magnetic
 \varnothing 20, 25, 32, 40, 50, 63 mm

- » Reduced dimensions
- » Different mounting options
- » Perfect alignment, perfect linearity

Series 27 has been designed to reduce the cylinders sizes as much as possible. These cylinders have been constructed with clean lines using stainless steel for both the tube and the rod and Aluminium for the end-blocks.

The choice of material and other design features have allowed to create a range of versatile and reliable cylinders. The precise method of securing the tube to the end block ensures that all the parts are perfectly aligned. Mechanical cushioning has been fitted on these cylinders in order to reduce noise produced by the piston impact on the end-blocks. Cylinders Series 27 are suitable for assembling with magnetic sensors. Various mounting bracket accessories enable the cylinders to be fitted to suit the requirements of a particular application.

GENERAL DATA

Type of construction	flanged
Operation	double acting
Materials	rod: \varnothing 20 - 25 stainless steel AISI 303 - \varnothing 32 ÷ 63 stainless steel AISI 420B tube: INOX AISI 304 piston and rod seals = PU
Mounting	feet - trunnion - steel bar - pins
Strokes min-max	all diameters 10 - 1000 mm
Bores	\varnothing 20, 25, 32, 40, 50, 63
Operating temperature	0°C ÷ 80°C (with dry air - 20°C)
Operating pressure	1 ÷ 10 bar
Speed	10 ÷ 1000 mm/sec (no load)
Fluid	filtered air, without lubrication. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.

Series 42 cylinders

Single and double-acting, magnetic, cushioned
Ø 32, 40, 50, 63

- » Perfect alignment
- » Different mounting options

Series 42 cylinders have been designed without tie rods to assure an extremely clean design.

Stainless steel has been used for the tube and the rod, while the end cover is made in anodized Aluminium. These cylinders are normally equipped with adjustable end-stroke cushioning and with a mechanical cushioning in order to make the impact of the piston less noisy as it reaches the end of the stroke.

GENERAL DATA

Type of construction	compact - flanged
Operation	single-acting or double-acting
Materials	end-blocks = AL tube = stainless steel AISI 304 rod = stainless steel AISI 420B other parts (see coding)
Type of mounting	front flange, rear flange, feet, front and rear trunnion, threaded pins
Strokes min - max	10 - 1000 mm
Operating temperature	0 ÷ 80°C (with dry air -20°C)
Operating pressure	1 ÷ 10 bar (double-acting); 2 ÷ 10 bar (single-acting)
Speed	10 ÷ 1000 mm/sec (NO LOAD)
Fluid	clean air, without lubrication. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.

Series 69 rotary cylinders

Magnetic, cushioned

∅ 32, 40, 50, 63, 80, 100, 125 mm

Rotational angles: 90°, 180°, 270° and 360°

- » Male or female version
- » Clean design

Through an adjustment screw it is possible to recover part of the play between pinion and rack.

On the heads there is a screw which allows rotation to be adjusted by $\pm 5^\circ$.

Series 69 rotary cylinders are available in 7 different bores and can satisfy a large range of operational requirements.

GENERAL DATA

Type of construction	with internal tie-rods
Operation	double-acting
Materials	end blocks / tube / body = AL rack = steel rack guide shoe = acetal resin pinion = hardened steel seals = NBR
Type of mounting	threaded holes in the central body by means of brackets for ISO 15552 cylinders
Bore	∅ 32, 40, 50, 63, 80, 100, 125
Operating temperature	0°C ÷ 80°C (with dry air - 20°C)
Standard rotation angles	90°, 180°, 270°, 360° (others on request)
Bearings	Ball bearings (∅ 32 mm teflon bronze guide)
Operating pressure	1 ÷ 10 bar
Fluid	filtered air class 7.8.4 according to ISO 8573-1. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted

Products designed for industrial applications.
General terms and conditions for sale are available on www.camozzi.com.

Series 30 rotary cylinders

Non magnetic, cushioned and not cushioned
 ø 50, 63, 80, 100 mm
 Rotational angles: 90° and 180°

SERIES 30 ROTARY CYLINDERS

Series 30 rotary cylinders are made of a special Aluminium profile. Their compact dimensions and clean lines give a good aesthetic appearance. A unique wear resistant guide block gives increased service life to the unit.

Positioning gears are provided for the rotations. On the heads there is a screw which allows rotation to be adjusted by ± 5°.

GENERAL DATA

Type of construction	profile
Operation	double acting
Materials	aluminium profile body & end blocks - NBR seals - other parts - hardened steel
Mounting	by means of holes in body
Bore	ø 50 - 63 - 80 - 100
Installation	in any position
Working temperature	0°C ÷ 50°C (- 20°C on dry air)
Standard rotation	90° - 180°
Operating pressure	0.5 ÷ 10 bar
Fluid	clean air with or without lubrication

Series ARP rotary actuators

Model: "Rack & Pinion"

Sizes: 1, 3, 5, 10, 12, 20, 35, 55, 70, 100, 150, 250, 400

Rotational angles: 90°

- » ATEX certified product
- » Wide range of available sizes
- » Air connections in accordance with Namur VDI/VDE 3845 drilling
- » Interface drilling of the process valve in accordance with ISO 5211 standard

Series ARP rotary actuators have been designed to meet the high demands by the process industry, where they predominantly are used for controlling the opening and closing process valves whereas ball valves and butterfly valves are the most common types.

The actuators exist in thirteen different sizes in order to cover a wide range of applications. Through adjusting screws located on the end caps it is possible to mechanically adjust the opening/closing angle by $\pm 5^\circ$.

All Series ARP rotary actuators are ATEX certified, the air connections are realized in accordance with Namur VDI/VDE 3845 drilling, while the interface drilling of the process valve is in accordance with ISO 5211 standard.

GENERAL DATA

Type of construction	Rack and pinion type
Operation	spring return (single-acting), double-acting
Materials	extruded AL-profile body (pressure diecasted anodized AL body for mod. ARP400) pressure diecasted AL end caps and pistons / racks (end caps in technopolymer for mod. ARP001) zinc-plated steel pinion - POM guide parts - NBR seals
Sizes	001, 003, 005, 010, 012, 020, 035, 055, 070, 100, 150, 250, 400
Operating temperature	- 30°C ÷ 100°C
Rotation angle	90°
Type of mounting	direct to the flange of the valve through screws and bolts, or through mounting kits consisting of bracket and adaptor pin*
Operating pressure	2 ÷ 10 bar
Fluid	filtered air without lubrication. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.
Available spare part kits	- kits which include sliding parts and seals; - kits containing springs for transforming an actuator from double-acting to single-acting with spring return.
Certification	ATEX

* Bracket and adaptor pin is not supplied by Camozzi

SERIES ARP ACTUATORS

PNEUMATIC SYMBOLS

The pneumatic symbols which have been indicated in the CODING EXAMPLE are shown below.

CD 17

CD 19

CD 21

TORQUE FORCE DIAGRAM GENERATED BY A DOUBLE-ACTING ACTUATOR

The above graph shows the torque force (in Nm) generated by a double-acting rotary actuator Series ARP during the closing action. The action starts from the 90° position and finishes at 0°. One of the features/advantages with a "rack and pinion" style rotary actuator is that the generated torque force is constant throughout the whole movement. See also the TORQUE FORCE TABLE on the following page.

The above graph shows the torque force (in Nm) generated by a double-acting rotary actuator Series ARP during the opening action. The action starts from the 0° position and finishes at 90°. One of the features/advantages with a "rack and pinion" style rotary actuator is that the generated torque force is constant throughout the whole movement. See also the TORQUE FORCE TABLE on the following page.

TORQUE FORCE DIAGRAM GENERATED BY A SINGLE-ACTING ACTUATOR

The above graph shows the torque force (in Nm) generated by a single-acting rotary actuator Series ARP during the closing action. The action starts from the 90° position and finishes at 0°. The generated torque force is at the highest at 90°, while it decreases along the stroke due to the fact that the springs get less compressed. In this case it is the springs which generates the driving force. See also the TORQUE FORCE TABLE on the following page.

The above graph shows the torque force (in Nm) generated by a single acting rotary actuator Series ARP during the opening action. The action starts from the 0° position and finishes at 90°. The generated torque force is at the highest at 0°, while it decreases along the stroke due to the fact that the springs get more compressed, (the counter force increases). In this case it is the compressed air which generates the driving force. See also the TORQUE FORCE TABLE on the following page.

Series QR

Rotary actuators with rack and pinion system

Magnetic, cushioned

7, 10, 20, 30, 50 mm

Rotation angles: 0 - 190°

- » Compact design
- » High rotation stability
- » Adjustable rotation angle
- » Easy to install
- » Mechanical or hydraulic shock absorbers
- » Can be integrated into manipulation systems

The Series QR rotary actuators are cylinders with a double piston, able to provide high torques while ensuring high stability and a precise rotary movement. The rotation angle can be easily set as desired between 0° and 190° by means of adjustment bolts or hydraulic absorbers positioned on one side of the rotary table. The use of shock absorbers allows the dampening of two to five times more kinetic energy than with regulation bolts. The rotary table is compact and allows direct mounting of the load. Their compact design, lightness and ease to combine with EOAT make these actuators particularly suitable for use in the assembly and packaging sectors and any application that requires transfer, tilting or rotation of objects.

GENERAL DATA

Type of construction	"Rack & Pinion" system
Operation	double-acting
Materials	profile, end blocks and rotor = aluminium - rack = steel - pinion = steel - rack's guide ring = PTFE - seals = NBR
Type of mounting	by means of screws in the central body
Sizes	07, 10, 20, 30, 50
Operating temperature	0°C ÷ 70°C
Standard rotation angles	0 - 190°
Minimum rotation angle (with shock absorber)	10 = 66°, 20 = 52°, 30 = 46°, 50 = 70° (under these values the rotation is totally cushioned)
Repeatability	<0.2°
Bearings	ball bearings
Operating pressure	1 - 10bar, 1 - 7bar (for 7mm), 1-6bar (for versions with shock absorber)
Medium	filtered air in class 7.8.4 according to ISO 8573-1 standard. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.

30	192	189	5.1
50	309	291	9.5

SIZING / CHOICE OF THE ACTUATOR

HOW TO CHOOSE THE SUITABLE ROTARY ACTUATOR:

OPERATING CONDITIONS:

Pressure: 4bar (0.4 MPa)

Rotation angle: 90°

Rotation time: 1.0 second

Load:

P1 = mass of the plate at the left of the centre of rotation 0.066 kg

P2 = mass of the plate at the right of the centre of rotation 0.151 kg

kg

P3 = mass of the load 0.216 kg

1) ROTATION TIME

Check whether the rotation time requested by the application falls within the range of values of the section "kinetic energy and rotation times".

Requested rotation time: 1.0 s/90°

2) NECESSARY TORQUE

Check whether the torque requested by the application falls within the range of values defined in the section "output torque and permissible loads".

TYPES OF LOAD:

-STATIC LOAD (Ts)

A load that requires pressure force only

F = pressure force (N)

L = arm between the barycentre of the load and the centre of the axis (mm)

$$T_s = F \cdot L \text{ (Nm)}$$

-RESISTANCE LOAD (Tf)

A load that is affected by external forces such as friction and gravity. Since the aim is to move the load, it is necessary to adjust the speed and leave a margin of 5/6 N of actual torque.

M = actual torque of the actuator (Nm)

μ = friction coefficient

m = mass of the load (kg)

g = gravitational acceleration (m/s²)

$$M > (3 + 5) \cdot T_f \text{ (Nm)}$$

$$F = \mu \cdot m \cdot g \text{ (N)}$$

$$g = 9.8 \text{ (m/s}^2\text{)}$$

$$T_f = F \cdot L \text{ (Nm)}$$

- LOAD OF INERTIA (Ta)

The load must be rotated by the actuator, it is necessary to adjust the speed and leave a margin of 10N of actual torque.

M = actual torque of the actuator (Nm)

I = moment of inertia (kgm²)

α = angular acceleration (rad/s²)

θ = rotation angle

t = rotation time (s)

$$M \geq 10 \cdot T_a \text{ (Nm)}$$

$$T_a = I \cdot \alpha \text{ (Nm)}$$

$$\alpha = \frac{2 \cdot \theta}{t^2} \text{ (rad/s}^2\text{)}$$

In the example the only force to overcome is the force of inertia as the other two are null.

Start calculating the moment of inertia (I) based on the load.

I1 - PLATE

I3 - LOAD

The total moment of inertia (I) is:

Calculate the angular acceleration (α).

Based on the conditions $\theta=90^\circ = \pi/2$ rad, $t=1.0s$ you will have:

Therefore the load of inertia (Ta) equal to the necessary torque, is given by:

μ = safety coefficient

3) PERMISSIBLE KINETIC ENERGY

Check whether the kinetic energy requested by the application falls within the range of values of the section "maximum permissible kinetic energy and rotation times"

Kinetic energy (E) is given by:

4) MAXIMUM PERMISSIBLE LOAD

Check whether the maximum load requested by the application falls within the range of values of the section "output torque and permissible loads" and respects the following relation:

Ws = actual axial load

MWs = max axial load

Wr = actual radial load

MWr = max radial load

M = actual torque

MM = max torque

$$I_1 = m_1 \cdot (4 \cdot a_1^2 + b^2) / 12 + m_2 \cdot (4 \cdot a_2^2 + b^2) / 12 = 0.066 \cdot (4 \cdot 0.035^2 + 0.07^2) / 12 + 0.151 \cdot (4 \cdot 0.08^2 + 0.07^2) / 12 = 0.00044 \text{ Kg}m^2$$

$$I_3 = m_3 \cdot (4 \cdot a_3^2 + b_3^2) / 12 + m_3 \cdot c_3^2 = 0.216 \cdot (4 \cdot 0.05^2 + 0.08^2) / 12 + 0.216 \cdot 0.055^2 = 0.00095 \text{ Kg}m^2$$

$$I = I_1 + I_3 = 0.00044 + 0.00095 = 0.00139 \text{ Kg}m^2$$

$$\alpha = 2 \cdot \theta / t^2 = (2 \cdot \pi / 2) / 1^2 = 3.14 \text{ rad/s}^2$$

$$T_a = \mu \cdot I \cdot \alpha$$

$$T_a = 5 \cdot 0.00139 \cdot 3.14 = 0.00218 \text{ Nm}$$

$$E = 0.5 \cdot I \cdot \alpha^2 = 0.5 \cdot 0.00139 \cdot 3.14^2 = 0.0068 \text{ J}$$

$$\frac{W_s}{M W_s} + \frac{W_r}{M W_r} + \frac{M}{M M} \leq 1$$

AXIAL LOAD (Ws)

The axial load (Ws) is given by:

$$PT = P1 + P2 + P3 = 0.066 + 0.151 + 0.216 = 0.43 \text{ Kg}$$

$$Ws = PT \cdot g = 0.43 \cdot 9.81 = 4.21 \text{ N}$$

RADIAL LOAD (Wr) - there is no radial load (Wr)

ACTUAL TORQUE (M)

F1 = force on the area of the plate at the left of the centre of rotation (N)
c1 = arm of F1 (m)

$$F1 = P1 \cdot g = 0.066 \cdot 9.81 = 0.64 \text{ N}$$

F2 = force on the area of the plate at the right of the centre of rotation (N)
c2 = arm of F2 (m)

$$F2 = P2 \cdot g = 0.151 \cdot 9.81 = 1.48 \text{ N}$$

M1 = moment generated by the whole plate (Nm)

$$M1 = F1 \cdot c1 - F2 \cdot c2 = 1.48 \cdot 0.04 - 0.64 \cdot 0.0175 = 0.048 \text{ Nm}$$

F3 = force of the weight of the load (N)
M3 = moment generated by the load (Nm)

$$F3 = P3 \cdot g = 0.216 \cdot 9.81 = 2.11 \text{ N}$$

$$M3 = F3 \cdot c3 = 2.11 \cdot 0.055 = 0.116 \text{ Nm}$$

The actual torque (M) is given by summing M1 + M3:

$$M = M1 + M3 = 0.048 + 0.116 = 0.164 \text{ Nm}$$

5) CHOICE OF THE SUITABLE ACTUATOR

With the results obtained from the points above, we can say that:

1. Rotation time 1.0s/90° is satisfied by all sizes
2. Total load of 0.0218 Nm at 4bar is already guaranteed by QR07
3. Kinetic energy of 0.0068J is guaranteed by size 10
4. Maximum permissible load of QR10A is major than the one examined.

The most suitable rotary actuator for the application is QR10A

HOW TO CALCULATE THE MOMENT OF INERTIA

$$I = m \cdot \frac{a^2}{12}$$

1-THIN SHAFT

Axis of rotation perpendicular to the shaft, aligned to the barycentre

$$I = m \cdot \frac{a^2}{12}$$

2-THIN RECTANGULAR PLATE

Axis of rotation parallel to side b, aligned to the barycentre

$$I = m \cdot \frac{a^2 + b^2}{12}$$

3-THIN RECTANGULAR AND PARALLELEPIPED PLATE

Axis of rotation perpendicular to the plate, aligned to the barycentre

$$I = m \cdot \frac{r^2}{2}$$

4-ROUND PLATE OR COLUMN

Axis of rotation passing through the central axis

$$I = m \cdot \frac{2r^2}{5}$$

5- SOLID SPHERE

Axis of rotation passing through the centre of the diameter

$$I = m \cdot \frac{r^2}{4}$$

6-THIN ROUND PLATE

Axis of rotation passing through the centre of the diameter

$$I = m \cdot \frac{3r^2 + a^2}{12}$$

7-CYLINDER

Axis of rotation passing through the central axis and aligned to the barycentre

$$I = K + m \cdot L^2$$

$$K = m \cdot \frac{r^2}{2}$$

8-AXIS OF ROTATION AND BARYCENTRE NOT ALIGNED

K = moment of inertia on the barycentre of the load, to replace with one of the previous figures (for example 4)

$$I_A = \left(\frac{a}{b}\right)^2 \cdot I_B$$

9-TRANSMISSION THROUGH TOOTHED GEARS

- 1) Calculate the moment of inertia "IB" for the rotation of shaft "B"
 - 2) "IB" is converted into moment of inertia "IA" for the rotation of shaft "A"
- a/b = n° of teeth of toothed gears

Series 50 rodless cylinders

Double-acting, magnetic, cushioned
 ø 16, 25, 32, 40, 50, 63, 80 mm

SERIES 50 CYLINDERS

- » Four ports on each chamber
- » Possibility to supply both chambers from one side (on request)

Series 50 rodless cylinders are available in 7 different diameters to cover as many applications as possible. A permanent magnet is assembled on the cylinder piston allowing the position to be detected by means of proximity switches positioned on the sliding axis. This series of cylinder is normally supplied with end-stroke cushioning, that can be regulated by means of a screw located on the end-cover.

The Series 50 cylinders are recommended to be used according to the load values and torque forces detailed in the relative tables.

GENERAL DATA

Type of construction	rodless with integral carriage
Operation	double-acting
Materials	end-covers, piston and barrel = AL seals = PU and NBR
Operating temperature	0°C ÷ 50°C (with dry air - 10°C)
Operating pressure	1 ÷ 8 bar
Speed	10 ÷ 1000 mm/sec (without load)
Fluid	clean air, without lubrication If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.
Strokes min - max	for all bores 100 ÷ 4000 mm
Stroke tolerance	strokes ≤ 1000 mm = 0 / +0,6 mm strokes > 1000 mm = 0 / +3 mm
Type of mounting	foot mounted

Series 52 rodless cylinders

Double-acting, magnetic, cushioned
Ø 25, 32, 40, 50, 63 mm

SERIES 52 CYLINDERS

- » Three main versions, Basic, Slide bearing and Roller bearing
- » Extra short carriage as option for all versions
- » Possibility of feeding both chambers from one side only

Series 52 rodless cylinders are available in 5 diameters (25, 32, 40, 50 and 63 mm) and comes in three main versions: Basic (M), with Slide bearing (G) and with Roller bearings (R). Furthermore these three main versions are each available with either standard- or short carriage to cover a wider range of applications.

A permanent magnet is assembled on the piston allowing the position to be detected by means of proximity switches positioned in grooves located on 3 sides on the cylinder profile. The cylinder is equipped with an end stroke cushioning which can be regulated by means of a screw located on each end cover of the cylinder. These cylinders are also available in versions with air supply from one side (end cover) only if needed.

GENERAL DATA

Models	Standard, with slide bearings, with roller bearings, air supply from one or both sides, with standard or short carriage. For sizes 50 - 63 roller bearings version is not available.
Materials	AL (anodized), plastic, hardened steel, seals: NBR, PU
Operating temperature	-10°C ÷ +70°C
Operating pressure	1 ÷ 8 bar 1,5 ÷ 8 bar (Ø 25 for "R" version)
Speed	10 ÷ 1000 mm/sec (without load)
Fluid	filtered air, without lubrication. If lubricated air is used, it is recommended to use ISO VG32 oil. Once applied the lubrication should never be interrupted. If speeds exceed 1 m/s lubricated air is recommended.
Bore size	Ø 25 Ø 32 Ø 40 Ø 50 Ø 63
Cushioning length (mm)	14 mm - Ø 25 20 mm - Ø 32 25 mm - Ø 40 22 mm - Ø 50 32 mm - Ø 63
Strokes with standard carriage (version "P")	max 6000 mm - Ø25 max 5950 mm - Ø32 max 5900 mm - Ø40, Ø50 max 5880 mm - Ø63
Strokes with short carriage (version "C")	max 6000 mm
Stroke tolerance	strokes ≤ 1000 mm = 0 / +0,6 mm strokes > 1000 mm = 0 / +3 mm
Connection	G1/8 (Ø 25; 32) G1/4 (Ø 40) G3/8 (Ø 50; 63)

LOADS AND TORQUE FORCES Ø 25 - 32

COMPLEX LOADS

If more than one force and torque is applied simultaneously, they have to be calculated according to the following formula: $L/L(\max) + Ls/Ls(\max) + M/M(\max) + Ms/Ms(\max) + Mv/Mv(\max) \leq 1$. For models 52M, the load and torque values refer to the center of the tube. For models 52G/52R the load and torque values refer to the center point of the external guide. It is also necessary for these models to guarantee on the fixing surface a max 0.1 flatness's value. The load and torque values refer to a velocity of: Models 52M/52G/52M/52G $\leq 0,2$ m/s, models 52R ≤ 2 m/s. Load adjustment coefficients can be found on the following page.

V	0.2 m/s	0.3 m/s	0.4 m/s	0.5 m/s	0.75 m/s	1 m/s
C	1	0.75	0.5	0.4	0.27	0.2

Table showing the maximum permitted loads and torque forces

END CUSHION DIAGRAM AND LOAD ADJUSTMENT COEFFICIENTS

The end cushion regulating screw has to be regulated to obtain a smooth movement at the end of stroke. In those applications which have different values than the ones stated in the diagram, external shock-absorbers have to be used. The shock-absorber should be centrally located with respect to the center of the mass. The diagram applies for horizontal operations.

LOAD ADJUSTMENT COEFFICIENTS

Speed - Coefficient:

0,2 m/s	- 1
0,3 m/s	- 0,75
0,4 m/s	- 0,5
0,5 m/s	- 0,4
0,75 m/s	- 0,27
1 m/s	- 0,2

LOADS ACCORDING TO SUPPORTS DISTANCE

DEFLECTION 0.5 mm
The charts have been made according to a max. deflection of 0.5 mm and 1 mm when a load (N) is applied. The charts give the max distance between two supports in order to stay within the deflection range given.

DEFLECTION 1 mm
The charts have been made according to a max. deflection of 0.5 mm and 1 mm when a load (N) is applied. The charts give the max distance between two supports in order to stay within the deflection range given.

Cylinders with standard carriage Mod. 52M2P

The cylinder has two supply ports "I" for both endcovers. The operator needs to choose which one of the two ports to use on each endcover. The remaining port has to be closed with the supplied tap.

+ = add the stroke
K = cushion regulation screw

Cylinders with slide bearing Mod. 52G8C

The cylinder has six supply ports (I), three for one direction (x-h-w), and the other three for the opposite direction (y-z-k). With supporting feet (mod. B-52 / BA-52), ports "h" and "z" have to be closed.

Where no dimensions are presented, refer to dimensions of cylinder model 52G2C. The guide can be applied on the right side, if requested.

Series CST-CSV-CSH, CSB-CSC-CSD, CSG magnetic proximity switches

Reed

Magneto-resistive - Hall effect (Series CST, CSV, CSH only)

- » Series CST, CSV, CSH, CSG switches: integrated in the actuator profile, with or without M8 connector and new ATEX version
- » Series CSB switches: for grippers CGA, CGP
- » Series CSC switches: for grippers CGLN
- » Series CSD switches: for grippers CGSN, CGPT, CGPS, RPGB, CGCN, CGZT
- » Series CSG switches: ATEX and UL certified

The magnetic proximity switches define the position of the piston in cylinders or grippers. When the internal contact is actuated by a magnetic field, the sensors complete an electrical circuit and provide an output signal to actuate directly a solenoid valve or a PLC. A yellow or red LED diode shows when the internal magnetic contact is closed.

The switches are available in two different versions - Reed with mechanical switching and with electronic switching - and they are subdivided into Hall effect and Magneto-resistive. The electronic versions are suggested for heavy duty with frequent operations and strong vibrations.

SERIES CST, CSV, CSH GENERAL DATA

Operation	Reed contact Magnetoresistive Hall effect
Type of output	Static or electronic PNP
Type of contact in Reed switches	Normally Open (NO) Normally Closed (NC)
Voltage	see the characteristics of each model
Max current	see the characteristics of each model
Max load	8 W DC and 10 VA AC (Reed)
Protection class	IP67
Materials	plastic body encapsulating epoxy resin; cable in PVC, connector in PVR, connector body in PU
Mounting	directly into the groove or by means of adapters
Signalling	by means of a yellow diode Led
Protections	see the characteristics of each model
Switching time	<1,8 ms (Reed); <1 ms (Magnetoresistive - Hall effect)
Operating temperature	-10°C + 80°C
Electrical duration	10.000.000 cycles (Reed); 1.000.000.000 cycles (Magnetoresistive - Hall effect)
Electrical connections	with a 2-wire cable, section 2x0.14, 2m (standard), high flexibility; with a 3-wire cable, section 3x0.14, 2m (standard), high flexibility; with a M8 connector and cable of 0.3 m

SWITCHES ELECTRICAL CONNECTIONS

Reed switches
BN = brown
BU = blue
BK = black

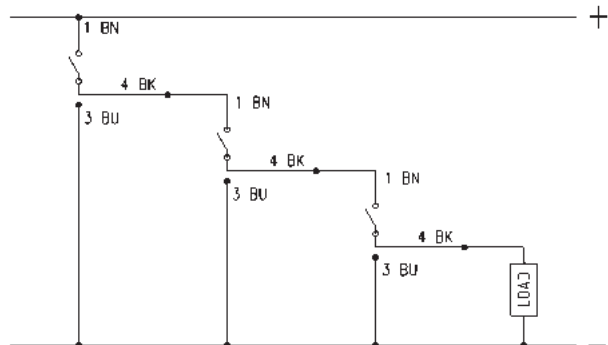

Magnetoresistive and Hall effect switches
BN = brown
BU = blue
BK = black

Connecting schemes in series

The 3-wire version of the Reed sensors has been designed to allow the connection of several sensors in series, as there is no voltage drop between the supply and the load. See connecting scheme. The voltage drop is 2.8V for the 2-wire Reed sensors and 1.0V for 3-wire Magnetoresistive and Hall effect sensors.

1 BN = Brown
3 BU = Blue
4 BK = Black
L = load

Magnetic proximity switches with 2- or 3-wire cable for T-slot

Note for 2-wire switches Mod. CST-220, CST-220-5:
in case of polarity reversing the sensor will still be operating, but the LED diode won't turn on.

Mod.	Operation	Connections	Voltage	Output	Max. current	Max Load	Protection	L = length cable

SERIES CST-CSV-CSH-CSB-CSC-CSD-CSG SENSORS

Electric circuit with protection against voltage spikes

DC applications: there is no protection on the Reed sensors on the inductive load, therefore it is advisable to use an electric circuit with protection against the voltage spikes. See picture above for a typical example.

- Legend:
 1 = Sensor
 2 = Load
 3 = Protection diode

Electric circuit with protection against voltage spikes

DC and AC applications: there is no protection on the Reed sensors on the inductive load, therefore it is advisable to use an electric circuit with protection against the voltage spikes. See picture above for a typical example.

- Legend:
 1 = Sensor
 2 = Load
 3 = Protection varistor

AC applications: there is no protection on the Reed sensors on the inductive load, therefore it is advisable to use an electric circuit with protection against the voltage spikes. See picture above for a typical example.

- Legend:
 1 = Sensor
 2 = Load
 C + R = Series of resistor and protection capacitor

Mounting of Series CST - CSH - CSG sensors

CST/CSH/CSG sensors can be directly mounted on cylinders:
 Series 31, 31R, 32, 32R
 Series 52
 Series 61
 Series 63 (CSH and CSG only)
 Series 69
 Series 6PF
 Series QC, QCBF, QCTF

Mounting of Series CSV sensors

CSV sensors must be assembled directly into the groove of cylinders:
 Series 50 \varnothing 16÷25
 Series QP - QPR \varnothing 12÷16

3-wire extension with M8 3-pin female connector

With PU sheathing, non shielded cable.
 Protection class: IP65

- 1 BN = Brown
- 4 BK = Black
- 3 BU = Blue

In case 2-wire sensors with M8 connector (Mod. CST-250N, CSV-250N, CSH-253) are used, please connect the brown wire to the supply (+) and the black wire to the load.

Mod.	L = cable length (m)
CS-2	2
CS-5	5
CS-10	10

3-wire extension with M8 3-pin male / female connector

Non shielded

S-CST-500	31, 31 Tandem and Multi-position, QCT, QCB, QCBT, QCBF, 61, 63MP, 6E, 5E, 69, 32, 32 Tandem and Multi-position

Series CSN proximity switches

Reed switch

The electrical proximity switch Mod. CSN 2032-0 consists of a Reed switch complete with an electronic protection circuit and a red LED indicator. The resin inside the casing ensures high protection and insulation.

It is designed so that it can be fixed directly on the tie-rod by means of two screws which assure the position longitudinal to the cylinder axle; and with a third screw for the anti-rotation positioning. The three terminals are indicated by the numbers 1, 2 and 3 and enable the following connections to be made (see the scheme).

GENERAL DATA

Mod.	CSN 2032-0
Voltage	from 12 to 220V AC and DC
Protection	IP54 / IP65 with connector DIN 43650
Material	glass-reinforced PA
Mounting	bracket for tie rod $\varnothing 6 \div \varnothing 10$
Signalling	integrated red LED
Electrical connection	DIN 43650 connector, Mod. 122-800
Max. current	1.5 A
Max. load	20 W DC - 30 VA AC
Actuating time	≤ 2 ms
Actuating tolerance	± 1 mm
Operating temperature	$- 25^{\circ}\text{C} \div + 75^{\circ}\text{C}$
Type of contact	NO (normally open)

TECHNICAL DATA

CONNECTION

- For inductive loads = solenoid valves, electrical magnets, relay.
- To connectors = terminals 1 - 2
- For capacitive loads = circuit with remaining tension (see PLC controls)
- To connectors = 1 - 3

Note: For connections with wires of approximately 10m, the connection shall be made as for a capacitive load.

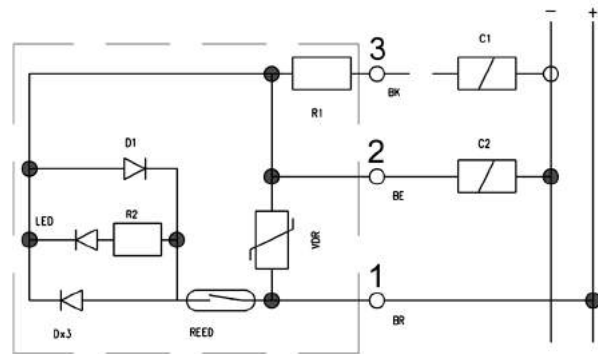

MAXIMUM LOADS

For maximum loads see relative diagram, those loads are valid only for inductive loads. For capacitive loads, using clamp 3 (or black wire) load must not exceed 80 mA and load must be given by PLC or, for electrical circuits, by microrelay or micro solenoid valves with 2W maximum consumption.

Note: When operating with direct current, clamp 1 must always be connected to the positive outlet (+). In cases where commands are given from the PLC and logic NPN, clamp 1 must be connected to the inlet. In cases where commands are given from the PLC and logic PNP, clamps 2 or 3 must be connected to the inlet.

LEGEND:

- C1 = capacitive load
- C2 = inductive load

SERIES CSN PROXIMITY SWITCHES

Maximum contact load

The maximum load (W) which the contacts are able to tolerate is that indicated in the section "General data", i.e.

- 20 W for direct current (DC)
- 30 VA for alternating current (AC)

The effective load allowed depends on the operating voltage (minimum 12 V, maximum 220 V) as shown in the following graph.

Note: this graph was obtained from practical tests performed using a load consisting of our Series A and 6 solenoid valves, at an operating speed of one stroke per second.

For higher operating speeds, you are advised to contact our technical department.

Series 43 hydrochecks

Bore \varnothing 40 mm
Regulated thrust or return stroke
Skip-Stop function

Series 43 hydrocheck units are available with two different types of control: regulated outward movement and fast return; or fast outward movement and regulated return. These hydrochecks come complete with an oil surge tank which ensures automatic equalisation. Speed variation is obtained by means of an incorporated flow regulator designed to allow comprehensive and constant use.

Upon request, they can be supplied with an incorporated stop valve or an acceleration valve or both.

To restore oil when the minimum level in the surge tank is reached, use the following oil and pump Mod. 43N-PMP: hydraulic oil, class H, ISO symbol HG 46, viscosity 4.5 E. at 40°C.

GENERAL DATA

Type of construction	with tie-rods
Operation	regulation of the hydrocheck's rod return (thrust) regulation of the hydrocheck's rod thrust (traction)
Controllable load	max. 600 Kgf without valves, max 500 Kgf with valves (including inertia of moving masses)
Operating temperature	-10°C ÷ +60°C
Media	hydraulic oil, class H, ISO symbol HG 46, viscosity 4.5 E. at 40°C
Speed	70 - 10000 mm/min without valves, 0 - 6000 mm/min with valves
Standard stroke	50, 100, 150, 200 (special stroke available on request)
Special designs	with STOP or SKIP and SKIP/STOP valve *
SKIP/STOP valve operating pressure	4 ÷ 8 bar
Type of mounting	feet Mod. B-40 (see B-41-40 for dimensions)

* = minimum stroke 80mm

Hydrochecks Mod. 43N-PTO-40

On request

+ = add the stroke

Series RL rod lock

For cylinders ISO 15552 and ISO 6432
 \varnothing 20, 25, 32, 40, 50, 63, 80, 100, 125 mm

SERIES RL ROD LOCK

- » Compact design
- » Functioning in both directions
- » Blocks without pressure releases with pressure

Series RL rod locks are available in 9 different sizes (diameters: 20, 25, 32, 40, 50, 63, 80, 100 to 125 mm). The compact dimensions allow units to be fitted on cylinders where space is limited. Rod lock units are often used to hold the load in position during Emergency Stop conditions or when the air supply may be accidentally disconnected from the system. The holding forces are measured at 8 bar and apply in both directions.

Caution!
 The rod lock should not be used to "brake" the piston rod in dynamic conditions and must only be applied when movement has ceased.

Note:
 the cylinder piston rod length must be increased when using a rod lock unit. See the table for the minimum extension lengths for each diameter.

GENERAL DATA

Type of construction	compact
Operation	piston operated clamp
Materials	housing: anodized AL clamp: brass seals: NBR
Cylinder diameter	\varnothing 20 - 25 - 32 - 40 - 50 - 63 - 80 - 100 - 125
Operating temperature	0°C ÷ 80°C (with dry air -20°C)
Configuration	pressure release
Operating pressure	3 ÷ 8 bar
Ports	M5 = \varnothing 20, 25, 32 - G1/8 = \varnothing 40, 50, 63, 80, 100, 125
Fluid	Filtered air without lubrication. If lubricated air is used, it is recommended to use ISOVG32 oil. Once applied the lubrication should never be interrupted.

PNEUMATIC SYMBOLS

The pneumatic symbols which have been indicated in the CODING EXAMPLE are shown below.

CONNECTION EXAMPLES

For a correct use of the rod lock Mod. RLC a pneumatic connection is recommended (as shown in the examples).

ROD EXTENSION and HOLDING FORCE

Table showing the rod extensions which are necessary for the rod lock mounting.

\varnothing	Rod extension [X] (mm)	Holding force [static load] (N)

Series SA shock absorbers

7 different sizes

Threads: M8x1 - M10x1 - M12x1 - M14x1,5 -
M20x1,5 - M25x1,5 - M27x1,5

- » Suitable for different applications
- » Usable with or without a stop collar
- » Self compensating

By using shock absorber Series SA, following advantages would be provided.

- Increased production rate
- Reduced maintenance costs
- Reduce noise and vibration
- Extended life time of the machine.

Series SA shock absorbers exist in 7 different sizes and are used to provide impact and noise absorption when stopping objects in motion. Series SA is of a self compensating type which makes it suitable for different applications such as low load/high speed or high load/low speed applications without requiring any additional adjustments on the shock absorber.

Series SA is designed so it can be used with or without a stop collar.
